Disc coulters – a clean solution

The disc coultter is important for leaving a clean finish to the ploughing. Disc coulters also make a considerable contribution to efficient ploughing. The disc coulters' precise cutting action helps achieve full inversion and complete incorporation of any crop residues as well as leaving an effective furrow clearance.

The disc coultter is available in a smooth or serrated profile with a diameter of 500 mm and in a serrated profile of 600 mm.

You can choose between short and long disc coultter carriers. In addition, the Teres can be optionally equipped with an adjustable disc coultter carrier.

Skimmers – for every situation

M2 Skimmer

The M2 skimmer is universally suited for use in grassland ploughing as well as where there are large amounts of crop residues, especially maize straw.

L2 Skimmer

The L2 Skimmer has an even stronger turned shape than the M2 Skimmer. It is therefore suitable for incorporating extreme volumes of organic matter.

G2 Skimmer

The use of the G2 skimmer ensures blockage-free ploughing, especially on heavy and sticky ground or when ploughing grassland for the first time. The easy adjustability of the skimmers means that the finish is left even more precise.

Subsoil points

Under certain conditions, it may be necessary to loosen the surface below the working depth of the plough body. The loosening legs are height-adjustable and can be easily replaced.
